The approach: how we went about achieving our goals

Four activities:

- Assessment of status quo and requirements in the BC for a useful market monitoring
- Assessment of deliverables and results – future market monitoring
- Definition of concrete actions for the future implementation
- Trainings on selected topics

This project is funded by the European Union
Проектот е финансиран од Европската Унија

Results: what we produced in 16 months

- Assessment report of actual data submissions to ERC (together with component 1) and current monitoring activities
- A vision report containing a vision of what the future market monitoring system could look like
- A report of potential implementation and system migration
- A draft version of an internal quarterly monitoring report
- Excel-Tools (in line with the results from component 1)
- A Handbook „From input-data to reports via Pivot-tables“
- Training sessions
- Materials for the design of the supplier switching process in the BC

Sustainability: how we achieve a lasting effect

- All the provided tools, materials and information are based on the status quo of ERC. Therefore these elements could be regarded as a further base for future activities.
- The market monitoring mechanisms are cornerstones for ensuring
 - non-discrimination,
 - effective competition
 - and the efficient functioning of the market.
- Data management, the transforming of key-figures and indicators and the developing of market reports are essential for transparent markets and increases the understanding of market participants
- Reporting and publications of facts and figures about the energy markets contribute to the awareness of customers for energy prices and the energy demand.
- Effective market monitoring increases competition on the energy markets.
- Effective market monitoring and more transparency open the market and attract new market participants.

Component 2:

At the Energy Regulatory Commission, we work to translate international treaty requirements into benefit for players on our national energy markets. We promote market opening and market-driven, competitive energy prices. Our focus is on strengthening the ties with our neighbours to foster competition nationally and on creating clear and easily understandable rules for you to find your way around the market.

We are your energy partner.
